

## FIRST-YEAR STUDENT EXPECTATIONS: PRE- AND POST-ORIENTATION

Denise Krallman, Institutional Research Analyst  
Todd Holcomb, Associate Director, Office of Residence Life & New Student Programs  
Miami University, Oxford

### Introduction

Every year college freshmen enter institutions of higher education with a set of preconceived ideas and expectations. In some cases, these expectations are unrealistic and can result in a student facing academic or social failure and withdrawal from the institution. The purpose of this study was to identify the academic, personal and social expectations of first-year students at Miami.

In May, 300 paid-deposit students (randomly selected with an over sampling of minorities) were mailed the “PEEK-Perceptions, Expectations, Emotions and Knowledge about college,” a 30-item survey designed to measure student expectations in three areas: academic, personal and social. A list of the questions and the available responses are in Appendix A. A response rate of 68% was obtained from this group. During Orientation, first year students were involved in various intervention activities designed to assist them in understanding the context of a college education. These activities included small group discussions with faculty and staff about student life at Miami University, individual faculty and academic advisor meetings, and student awareness skits. In August, 300 students who had attended Orientation (randomly selected, excluding students who participated in the first mailing) were mailed the same survey. With 96% of Miami’s first-year students attending Orientation, the responses of this group can be considered reflective of the attitudes of the incoming students. A response rate of 36% was obtained from this group. Due to the fact that the second group was sampled after Orientation, we have been able to make some comparisons between students’ attitudes before Orientation and students’ attitudes and expectations after attending Orientation. A three-way Analysis of Variance was conducted on all 30 questions using gender, student of color status and Pre- and Post-Orientation group. These analyses were conducted to help support our findings. Results of these analyses are available upon request. Any significant differences between Pre- and Post-Orientation groups that are found should be interpreted very carefully due to the fact that the same students were not involved; however, when differences do occur discussion can arise on possible explanations and interpretations. A breakdown of some demographic information about these two groups can be found in Table 1.

**Table 1**

	Pre-Orientation N = 201		Post-Orientation N = 108		Total Survey Group N = 309		First-Year Students N = 3,364	
	N	%	N	%	N	%	N	%

### Academic Experiences

First-year students appear to have an impression of academic life that includes 1) dependence on faculty for learning assistance -- over 40% indicate that it is likely that an instructor will tell them if they are having difficulty in a course; almost 25% expect instructors to teach them study skills needed for their courses; nearly 20% say it's likely that their college instructors will keep track for them of how well they are keeping up with assignments and following the syllabus; over 50% indicate that it is likely their college instructors will be concerned about how well they are doing; and 2) expectations that academically college will be a repeat of high school -- 96% indicate it is likely their grades will be the same as in high school; over 60% expect not to have trouble doing well in their classes; 40% indicate that it is likely that the material presented in class will repeat what is in the textbook (See Table 2).

Interestingly, for those students responding after attending Orientation, their expectations towards their academic abilities in college changed when compared to those of the students responding before Orientation, perhaps a result of the intervention on the part of the staff and faculty involved in Orientation (Table 2). Those expecting a repetition of textbook material dropped by over 20%; expectation of academic performance dropped by almost 20% while grade expectations only dropped by 3%; and expectation on faculty involvement in the student's learning (the instructor will tell them if they are having difficulty in a course) dropped by almost 15%. From the three-way ANOVA, significant

differences were found by gender (instructor involvement); by Pre- and Post-Orientation group (grade expectations, repetition of textbook material, expectation of academic performance) and by gender x student of color status (grade expectations, repetition of textbook material and instructor involvement). These results are summarized in Appendix B.

**Table 2**

<b>ACADEMIC EXPERIENCES</b>	<b>Extremely, Quite or Somewhat Likely</b>		
	<b>Total</b>	<b>Pre-Orientation</b>	<b>Post-Orientation</b>
My college grades should be about the same as were my high school grades.	96%	97%	94%
If I am having difficulty in a course, the instructor will tell me.	43%	48%	34%
The material presented by my instructors will simply repeat what is in my textbooks.	40%	48%	27%
My college instructors will be concerned about how well I am doing in their courses.	52%	54%	49%
I will not have trouble doing well in any of my courses.	63%	70%	52%
My college instructors will teach me the study skills I will need for their courses.	24%	26%	21%
My college instructors will keep track for me of how well I am following the class syllabus and keeping up with my assignments.	17%	20%	11%

## Personal Experiences

Pre-Orientation students expect to succeed at Miami University. They appear to be very confident in their preparation to perform college-level work and to participate actively in taking responsibility for their own learning. Post-Orientation figures show a dramatic change in the students' emotional reactions to whether or not they are prepared to do college-level work. It would seem that students begin to develop a more realistic picture of the collegiate environment after Orientation (see Table 3). Interestingly after Orientation, this realistic picture of Miami University leads the students to have lower confidence in their ability to succeed. Significant differences found in a three-way ANOVA (gender by students of color status by Pre- and Post-Orientation groups) can be found in Appendix B.

**Table 3**

<b>PERSONAL EXPERIENCES</b>	<b>Extremely, Quite or Somewhat Likely</b>		
	<b>Total</b>	<b>Pre-Orientation</b>	<b>Post-Orientation</b>
I will not need any outside help to do well in my courses.	51%	59%	36%
I will know exactly how college fits into my future goals and plans.	84%	89%	73%
It will be difficult to discipline myself to keep academic commitments, such as attending classes and being prepared for class.	26%	20%	38%
I am worried that I won't make it through college.	19%	16%	24%
The reading skills I developed in high school will be adequate for my college courses.	83%	88%	74%

## Social Experiences

Students' perceptions of family interaction, peer pressure and interaction with students who have values similar to their own changed the most between Pre- and Post-Orientation. Eighty-one percent of the students in the Pre-Orientation survey indicate they are likely to interact with students that have similar values to their own, while only 69% believe this to be true after Orientation. Ten percent more students in the Post-Orientation group perceive that the relationship with their family will likely change when they go to college. Miami University first-year students expect to experience a lot of social pressure in college and that impression increased in the Post-Orientation group (see Table 4).

Interestingly, men seemed to experience more change in the social experiences area than women when comparing the Pre- and Post-Orientation groups. After Orientation, more men expressed the likelihood for a changing relationship with their high school friends, the need to work at making new friends when they are on campus, and understanding that their classmates will have different values than themselves. A three-way ANOVA was conducted on the social experiences items (gender by students of color status by Pre- and Post-Orientation group) and the significant differences are shown in Appendix B.

**Table 4**

<b>SOCIAL EXPERIENCES</b>		<b>Extremely, Quite or Somewhat Likely</b>		
		<b>Total</b>	<b>Pre-Orientation</b>	<b>Post-Orientation</b>
I will have to work at making new friends.	Total	60%	59%	62%
	Men	59%	54%	71%
	Women	60%	61%	57%
My relationship with my family will not change when I go to college.	Total	60%	64%	54%
My relationships with my high school friends will not change when I go to college.	Total	36%	38%	32%
	Men	41%	46%	29%
	Women	32%	32%	32%
Most of my classmates will have values similar to mine.	Total	76%	81%	69%
	Men	77%	83%	63%
	Women	76%	79%	72%
I will experience a lot of social pressure in college.	Total	79%	75%	85%

### Students of Color

Significant differences cannot be found between the total group of white students and the students of color. However, within the students of color group there seems to be a wide range of differences. Most of these differences result from the surveys completed by African American students. The African American students comprised 15 of the 50 students of color in the total survey. There were not enough students of color in the Post-Orientation group to examine differences between Pre- and Post-Orientation groups.

African American students see themselves interacting less with faculty members and feeling that faculty members will have less interest in them (Table 5). Only 20% of the African American students believe they will have frequent opportunities to talk with their instructor as compared to 40% of the white students, and no African American students felt like their instructor would be concerned with how they are doing in class. African American students expressed an intent to join fewer organizations than they were involved in during high school. They also indicated having more stress than white students and concern over how college fits into their future goals. African American students expect to interact with students whose values are different than their own. African American students have different perceptions and expectations than white students and other students of color.

**Table 5**

<b>ACADEMIC, PERSONAL &amp; SOCIAL EXPERIENCES</b>	<b>Extremely or Quite Likely</b>		
	<b>White</b>	<b>Students of Color*</b>	<b>African American</b>
If I am having difficulty in a course, the instructor will tell me.	15%	12%	0%
I will know exactly how college fits into my future goals and plans.	45%	52%	26%
My college instructors will be very concerned about how well I am doing in their courses.	16%	14%	0%
Most of my classmates will have values similar to mine.	30%	20%	6%
In college, I will join fewer student organizations than I joined in high school.	20%	30%	40%
There will be frequent opportunities to talk to my college instructors.	40%	35%	20%
I will not feel stressed in college.	5%	14%	20%
My college instructors will get to know me on a personal level.	24%	24%	13%

\* Includes African American students.

### Conclusion

Miami first-year students come to the university with a set of expectations that we, as faculty and administrators involved in the learning and development of the student, must be made aware of. Coming in with unrealistic expectations can lead to disillusionment and failure. Orientation can serve as an important intervention experience to assist students in developing a realistic view of college experiences. As evidenced by this study, Orientation seems to help frame Miami University as a community of learners with a rigorous academic program. Areas where student expectations differed between the Pre- and Post-Orientation groups were:

- ◇ students' anticipated interaction with faculty
- ◇ students' perception of their peers and peer influence
- ◇ expected level of faculty participation in the student's learning process
- ◇ students' perceived academic skills as they enter college
- ◇ students' perception of academic assistance for success

## APPENDIX A

### **PEEK: Perceptions, Expectations, Emotions and Knowledge about College** **Weinstein, C., Palmer, D., and Hanson, G. © 1995, H&H Publishing** **Company, Inc.**

#### Available Responses:

Extremely likely to be a part of my college experience.

Quite likely to be a part of my college experience.

Somewhat likely to be a part of my college experience.

Not very likely to be a part of my college experience.

Not at all likely to be a part of my college experience.

#### ACADEMIC EXPECTATIONS

My college grades should be about the same as were my high school grades.

If I am having difficulty in a course, the instructor will tell me.

The material presented by my instructors will simply repeat what is in my textbooks.

My college instructors will be concerned about how well I am doing in their courses.

I will not have trouble doing well in any of my courses.

It will be more important to memorize what is being presented in my classes than to think about it.

My college instructors will teach me the study skills I will need for their courses.

There will be frequent opportunities to talk to my college instructors.

My college instructors will keep track for me of how well I am following the class syllabus and keeping up with my assignments.

I will have to check to see if I understand the material in my textbooks and other reading assignments.

#### PERSONAL EXPECTATIONS

I will not need any outside help to do well in my courses.

I will know exactly how college fits into my future goals and plans.

It will be difficult to discipline myself to keep academic commitments, such as attending classes and being prepared for class.

I will have to take a lot of responsibility for my own learning.

There is nothing I will rather be doing than getting my college degree.

I will have to generate my own interest in my college courses.

I will sometimes feel overwhelmed by the workload.

I will not feel stressed in college.

I am worried that I won't make it through college.

The reading skills I developed in high school will be adequate for my college courses.

## SOCIAL EXPECTATIONS

I will have to work at making new friends.

My relationship with my family will not change when I go to college.

My relationships with my high school friends will not change when I go to college.

Most of my classmates will have values similar to mine.

I expect to be treated more like a number and less like a person.

In college, I will join fewer student organizations than I joined in high school.

I will experience a lot of social pressures in college.

I will be exposed to students with a wide range of ages.

I will meet students with many different cultural backgrounds.

My college instructors will get to know me on a personal level.

**APPENDIX B**  
**THREE-WAY ANOVA RESULTS**  
 Indicating items of significance

Survey Item	Student of Pre- & Post-						
	Gender	Color-	Orientation	AB	AC	BC	ABC
